

Career delivery brief

William Earl Lemon | Technical program delivery and governance

PUBLIC SUMMARY • RÉSUMÉ-SOURCED

This brief connects career scope to the current AI-governance practice. It is a newly prepared summary of the final résumé approved by William Lemon, not an employer-issued case study or independent verification.¹

Case: contract and delivery governance

At Siemens Digital Industries Software (2021–2025), the résumé describes customer-facing leadership across contract negotiation, statements of work, delivery and business practice, with related program revenue over \$20M.¹

William reports identifying \$350K–\$500K in annual recurring operational inefficiencies through 25–30 monthly contract, SOW and financial reviews, and outlining corrective action. These are identified opportunities, not verified realized savings.¹

Case: multi-project program accountability

For NAVAIR and NCMS work, the résumé records 50–70 staff, budgets up to \$45M and 7–8 concurrent projects, with SOW-through-CDRL accountability. Those figures describe program scope, not personal revenue or measured delivery improvement.¹

Evidence available / not available

Available: the approved résumé, with detailed employment history and role descriptions. Not published: client contracts, internal financials, employer records or defense-program documents. No confidential employer artifact is reproduced.
